Northstack Technologies 4.8

Position: Frontend Software Engineer (Hybrid)

We are looking for a Senior GenAI Engineer to lead the development of generative AI solutions across our products. You will work on large language models, AI pipelines, and intelligent systems that impact thousands of users.

React · TypeScript · Next.js · Tailwind CSS · JavaScript · Accessibility · Git

Salary: \$5,000 - \$7,000 USD/month

NebulaSoft Labs 3.0

Position: DATA Scientist AI (Remote - Brazil)

Description: We are seeking a talented Data Scientist to join our AI team and help turn massive datasets into actionable insights that drive strategic decisions in industries like healthcare, finance, and retail.

Python · Machine Learning · SQL · Pandas · TensorFlow

Salary: \$120,000 - \$160,000 USD/year (plus equity)

Floware 4.0

Position: Product Designer (Remote - Japan)

We're looking for a creative and strategic Product Designer to help shape the future of our project management tool used by remote teams in over 100 countries. You'll work closely with product, engineering, and users to craft intuitive and delightful experiences.

Figma · UX Research · Design System · Prototyping

Salary: \$90,000 - \$130,000 USD/year (plus bonus and equity)

QuantumForge 4.9

Position: Backend Engineer (London)

We're hiring a skilled Backend Engineer to help build and scale the core infrastructure of our decentralized finance platform that processes millions of transactions daily. You'll work on high-performance systems and contribute to the future of secure, blockchain-integrated services.

Go · Node.js · Kubernetes · PostgreSQL · AWS

Salary: \$90,000 - \$130,000 USD/year (plus equity & performance bonus)

HelixAI 4.9

Position: Machine Learning Engineer (Argentina)

Join our growing AI team as a Machine Learning Engineer to develop cutting-edge models that power personalized healthcare recommendations for millions of users across the globe. You'll turn research into production-ready solutions that genuinely improve lives.

PyTorch · NLP · MLOps · Docker · GCP

Salary: \$110,000 - \$150,000 USD/year (plus stock options)

Northstack Technologies 4.8

Frontend Software Engineer

Texas, Austin · Hybrid · \$ 5,000 for mounth

APPLY NOW

We are looking for a Senior GenAI Engineer to lead the development of generative AI solutions across our products. You will work on large language models, AI pipelines, and intelligent systems that impact thousands of users.

RESPONSABILITIES

- Design, fine-tune, and deploy generative AI models (LLMs).
- Develop prompt engineering strategies and AI evaluation frameworks.
- Integrate AI solutions into scalable backend systems.
- Collaborate with product, design, and data teams.
- Monitor model performance, bias, and reliability.

REQUIREMENTS

- 5+ years of experience in software engineering or AI-related roles.
- Strong knowledge of Python and machine learning frameworks.
- Experience with LLMs, embeddings, and vector databases.
- Familiarity with cloud platforms (AWS, GCP, or Azure).
- Strong problem-solving and communication skills.

BENEFITS

- Hybrid work model.
- Health insurance.
- Career development programs.
- Modern tech stack and collaborative culture.

About us

Northstack Technologies is a global technology company focused on building scalable digital solutions for modern businesses. We specialize in cloud platforms, artificial intelligence, and enterprise software, helping organizations optimize operations and drive innovation.

Our teams work at the intersection of engineering, design, and data to deliver reliable, secure, and high-performance products. We believe in a collaborative culture, continuous learning, and technology as a catalyst for meaningful impact.

At Northstack, we value transparency, diversity, and long-term growth — both for our clients and our people.
